

# VIPRISCAR

Validation of an industrial process to manufacture isosorbide bis(methyl carbonate) at pilot level

## Deliverable D1.5

### Project Management Plan (I)

Lead Beneficiary	TECNALIA
Delivery Date	29/10/2018
Dissemination Level	Public
Status	Approved
Version	1
Keywords	WorkBreakdown Structure, Gantt Chart

This project has received funding from the Bio Based Industries Joint Undertaking (JU) under the European Union's Horizon 2020 research and innovation programme under grant agreement No 790440. The JU receives support from the European Union's Horizon 2020 research and innovation programme and the Bio Based Industries Consortium.

## Revision History

Revision	Date	Description	Reviewer
1	29-10-2018	First version	Hector Linuesa (LEITAT)

## EXECUTIVE SUMMARY

The main purpose of this deliverable is to document the Work Breakdown Structure (WBS) and the related elements that support the project's schedule:

Project task durations, dependencies and responsibilities,

Project milestones,

- Project deliverables,
- Project management mechanisms, and
- Gantt Chart.

The VIPRISCAR project work plan is results-based, with each Work Package (WP) mapping to an objective to produce new bioproducts from IBMC. The project is structured to ensure balanced work load and unambiguous responsibility for tasks and deliverables, with each deliverable responsibility of the task leader unless otherwise explicit in the WP description.

A Gantt Chart is annexed to this document to better understand the schedule of the different Work Packages and their components. The inter-relationships among the different project tasks and components is presented both graphically and in WP tables. The project schedule will be managed through success criteria, milestones and periodic control mechanisms.

The actual schedule performance will be compared to planned performance to implement corrective action when actual performance deviates from planned or required performance.

The Project Management Plan will be updated four times during the project execution (at Months 3, 12, 24 and 36).

Furthermore, Work Package and Tasks Leaders will be responsible for reporting on their activities at every Project Steering Committee meeting (every 6 months) to allow project progress to be tracked seamlessly. The actual Gantt Chart will then reflect progress achieved and agreement of the revised schedule, if necessary.

The intended audience of the Project Management Plan (PMP) is all project stakeholders including the BBI-JU, senior leadership and the project team.

## 1. INTRODUCTION

The Grant Agreement (GA) provides an in-depth description of the different Work Packages and components. However, the information is presented in such a way that hampers the appropriate management during project execution.

The Project Management Plan (PMP) is a formal document used to guide both project execution and project control. By showing the major deliverables, milestones, activities and responsibilities on the project, it is also a statement of how and when a project's objectives are to be achieved.

The main purpose of this deliverable is therefore to document the Work Breakdown Structure (WBS) and the related elements that support the project's schedule:

- Project task durations, dependencies and responsibilities,
- Project milestones,
- Project deliverables,
- Project management mechanisms, and
- Gantt Chart.

The intended audience of the PMP is all project stakeholders including the BBI-JU, senior leadership and the project team.

This deliverable, directly linked to task T1.2, is structured in the following chapters:

- **Chapter 1:** Introduction. Main purpose, intended audience and structure of the document.
- **Chapter 2:** Work breakdown structure and schedule. Work plan structure and individual Work Package description.
- **Chapter 3:** Graphical presentation of tasks interdependencies. Inter-relationships among the different project tasks and components
- **Chapter 4:** Schedule management. Success criteria, milestones and periodic control mechanisms.
- **Annex I:** VIPRISCAR Project Gantt Chart.

## 2. WORK BREAKDOWN STRUCTURE AND SCHEDULE

### 2.1 WORK PLAN STRUCTURE

The VIPRISCAR project work plan is results-based, with each Work Package mapping to an objective to produce new bioproducts from IBMC, as presented in sections 1.3.1, 1.3.3 and 1.3.4 of the Grant Agreement. In addition, many issues are cutting across each Work Package, risk, costs and data collection. WP8 is in charge of providing consistent methodology, data collection protocol and integration of this information.

The project is structured to ensure balanced work load and unambiguous responsibility for tasks and deliverables, with each deliverable responsibility of the task leader unless otherwise explicit in the WP description.

Table 1 summarises the main project components. In the following sections, details of the individual Work Packages are given including interdependencies among tasks and deliverables. A Gantt Chart is annexed to this document to better understand the schedule of the different Work Packages and their components.

### 3. GRAPHICAL PRESENTATION OF TASKS INTERDEPENDENCIES

The Figure 3.1 graphically summarises the inter-relationships among the different project tasks presented in the sections before.

**FIGURE 3.1: TASK INTERDEPENDENCIES**

## 4. SCHEDULE MANAGEMENT

The project schedule will be managed through success criteria, milestones and periodic control mechanisms.

### 4.1 PROJECT SUCCESS CRITERIA

A set of success criteria have been defined per deliverable and Work Package as it is shown in Table

**TABLE 4.1: PROJECT SUCCESS CRITERIA**

WP	Success indicator	Deliverable
1	First version of the Quality Assurance Plan documented	D1.1
1	The Quality Assurance Plan revised	D1.2
1	The Quality Assurance Plan revised	D1.3
1	Definitive version of the Quality Assurance Plan	D1.4
1	First version of the Project Management Plan available	D1.5
1	Project Management Plan updated	D1.6
1	Project Management Plan updated	D1.7
1	Definitive version of the Project Management Plan	D1.8
2	Intermediate results of the IBMC process development documented	D2.1
2	IBMC process development. Lab Technology Manual available	D2.2
2	Process simulation and preliminary up-scaling completed	D2.3
3	Report confirming validation and giving adaptation/investment strategy for the IBMC pilot process	D3.1
3	Protocol for IBMC process that has proven to result in the first 100-kg	D3.2
3	Plant up-scaling simulation completed	D3.3
4	Documented preparation of polyurethane dispersions (PUDs) with IBMC functional oligomers for coating formulation.	D4.1
4	IBMC derived NIPUs with amino terminal groups available	D4.2
4	IBMC based coatings form POUDs and NIPUS available	D4.3
5	Results documented.	D5.1

5	50 g of polycarbonate polyols have been produced and characterized. Report is available.	D5.2
5	First NIPUs are available.	D5.3
5	2 kg raw materials for adhesive formulation has been delivered to JOWAT. Report is available.	D5.4
5	Final formulation of NIPUs are available.	D5.5
5	Adhesive formulations are developed and characterized.	D5.6
6	IBMC-based biofunctionalized NIPU synthesized	D6.1
6	A proof of principle catheter of IBCM-based NIPU processed	D6.2
6	The biocompatibility and bifunctionality of the final prototype evaluated.	D6.3
7	Preliminary technical feasibility study completed	D7.1
7	Technical feasibility study completed	D7.2
7	Preliminary economic feasibility study, including the Life Cycle Costing (LCC) methodology definition and screening analysis	D7.3
7	Final economic feasibility analysis, including LCC results (CAPEX and OPEX quantification)	D7.4
7	Preliminary environmental study, including the Life Cycle Assessment (LCA) methodology and screening analysis	D7.5
7	Final environmental assessment, including LCA results	D7.6
7	The health and safety study finished	D7.7
7	First screening of European and local legal and non-legal limitations, barriers and standards identification	D7.8
7	Update of the European and local legal and non-legal limitations, barriers and standards, validation from partners involved	D7.9
7	Final analysis of the European and local legal and non-legal limitations, barriers and standards for VIPRISCAR products	D7.10
7	Full list of Key Performance Indicators corresponding to the WP7 (technical, economic, environmental and health & safety aspects)	D7.11
8	Market analysis available	D8.1
8	First version of the Business plan of commercial KERs documented	D8.2

8	Final version of the Business plan of commercial KERs available	D8.3
8	First version of the Data management plan documented	D8.4
8	Second version of the Data management plan updated	D8.5
8	Final version of the Data management plan available	D8.6
8	First version of the exploitation plan documented	D8.7
8	Second version of the exploitation plan updated	D8.8
8	Third version of the exploitation plan updated	D8.9
8	Final version of the exploitation plan available	D8.10
8	Full version of the dissemination and communication plan available	D8.11
8	Assessment of the dissemination and communication activities deployed in the first year	D8.12
8	Assessment of the dissemination and communication activities deployed in the second year	D8.13
8	Assessment of the dissemination and communication activities deployed in the third year	D8.14
8	Website operational with initial contents	D8.15
9	Authorisations for the realization of experiments obtained	D9.1
9	Authorisations for relevant facilities obtained	D9.2

## 4.2 MILESTONES

The Table 4.2 list the significant milestones in the project, their timing and the means of verification. TECNALIA will be responsible to track progress to milestone achievement.

**TABLE 4.2: PROJECT MILESTONES**

Milestone	Milestone name	Related WP(s)	Due date	Means of verification
<b>MS1</b>	Production of 1 kg of IBMC	2	12	1 kg of IBMC obtained at lab scale
<b>MS2</b>	100 kg of IBMC produces + Positive preliminary technical and economic study + Positive	3, 7	24	At least 100 kg of IBMC produced at PP scale + Reports

	preliminary environmental feasibility and health study			
<b>MS3</b>	At least 1 IBMC-based polymer shows preliminary suitable behaviour for one of the applications	4, 5, 6	27	Report

### 4.3 CONTROL MECHANISMS

The actual schedule performance will be compared to planned performance in order to implement corrective action when actual performance deviates from planned or required performance.

The Project Management Plan will be updated three times during the project execution (at Months 12, 24 and 36).

Furthermore, Work Package and Tasks Leaders will be responsible of reporting on their activities at every Project Steering Committee meeting (every 6 months) in order to allow project progress to be tracked seamlessly.

The actual Gantt Chart will then reflect progress achieved and agreement of the revised schedule, if necessary.

ANNEX I: VIPRISCAR GANTT CHART
